IVF Medications	\$2000-\$5000 US dollars per IVF cycle
IVF Consult with Dr. Tur-Kaspa	\$150-\$300 (will be taken off of the IVF fees if you pursue IVF with RGI)
IVF Preliminary Labwork	\$1000-\$2500 tests must be performed within 1 year of IVF cycle

*Please note: These costs are subject to change. Please discuss the cost for PGD with RGI. A genetic counselor at RGI can inform you of the costs that will apply to your family. RGI requires upfront payment for all services.

The laboratory setup fee will vary depending on the genetic condition and specific mutation(s) involved. The laboratory setup is a one-time fee used to develop a specific testing system for your family. In order to develop the PGD system for your family, RGI will require blood and/or additional samples from you and possibly additional family members. RGI's staff can inform you what samples are required for your family. The laboratory setup fee is required when the samples are sent to RGI for processing. It typically requires 3-10 weeks for RGI to complete the PGD laboratory setup. The setup must be completed before you begin your IVF cycle.

The cost for PGD and for the embryologist travel is due before you begin your IVF stimulation medications. In order to make this payment, please contact RGI at 773-472-4900.

Please contact Dana Pauling or Lama Eldahdah at the Reproductive Genetics Institute if you are interested in pursuing genetic testing with your IVF cycle at 773-472-4900 or by email at rgiworld@gmail.com.
